Abstract (en)

[origin: EP2708827A2] The inlet or outlet has a box (2) forming inlet-or outlet plenum and including a connecting part for supply- or exhaust line and a removable cover (4). The plenum stays in flow-connection with an environment through an opening (7), and the box includes two height adjustable bases (5). The cover is vertically and adjustably supported within the box. The opening is formed as a straight/belt slot that extends between a side wall of the box and cover. An adjustable screw (9) detachably fastens the cover in and/or to the box. The cover consists of a sheet selected from stainless steel or plastic. An independent claim is also included for a ventilation system.
