Abstract (en)

[origin: EP2708971A2] The device (1) has a control element (2) or slide switch that is actuatable by an operator, which is pressable from an original position into an operating position. An electronic shift unit is actuatable through pressures of the control element. The control element is swingably supported at a carrier part. The control element is pivotable around a pivotal axis (17) when the element is pushed from the original position into the operating position. The control element is displaceably supported at a rocker part (11).
