Abstract (en)

[origin: WO2012131222A2] The invention relates to an implantable medical device for the treatment of ptosis, particularly breast ptosis. The device comprises a suspension wire provided with a distal end portion and a proximal end portion. The device is characterised in that the distal end portion of the suspension wire comprises a wire shaft on which is mounted a part bearing at least one projection, advantageously an anchoring hook.
