Abstract (en)
[origin: WO2012156397A1] The invention relates to a load carrier with at least one fastening device for a vehicle which travels on a surface, wherein at least one supporting structure of the load carrier can be releasably connected to the vehicle by means of the fastening device at at least one first fastening point arranged in the rear region of the vehicle, and the fastening device has at least one geometrical axis which, during the fastening to the first fastening point, is oriented substantially rigidly parallel to a first plane defined by a longitudinal axis of the vehicle and a normal direction of the surface, wherein the supporting structure is supported via the fastening device at the first fastening point and on the surface via at least one additional axis lying temporarily on the surface.
