Abstract (en)
[origin: WO2012160323A2] The invention is a new suspension system for the paired front wheels of motorcycle type vehicles employing a transversely pivoted swing arm for each wheel of the said pair where the invention improves road holding by comparison to the prior art for an equivalent vehicle mass. The invention can also provide a much better suspension deflection than the prior art can deliver without compromising the associated motorcycle type vehicle's angle of lean.
