Abstract (en)
[origin: WO2012156653A1] The present invention relates to a load elevator device (1) installed in a construction (10). Such load elevator devices are known for moving loads from one level of the construction to another. However, the installation of said load elevators is limited and laborious, due to the space in which same must be integrated. In order to solve said problems, the invention provides a load elevator device comprising an integral rigid structure (9) including a lifting bracket (4), a guiding system (5) and a means (6) for driving said lifting bracket.
