Abstract (en)
[origin: WO2012156338A1] The invention relates to a fitting for a sliding door (3, 4), in particular for furniture, comprising at least one roller (8) that is rotatably mounted on a holder (15) and is supported on a rail (9), and a mounting element (6) to which a sliding door (3, 4) can be secured. According to the invention, a safety catch is provided on the holder (15) in order to secure the roller and prevent it from lifting away from the rail (9), wherein the safety catch comprises a rotatably mounted lever (10, 10', 10'') having an actuating section (23) and a hook section (11), which, in a securing position, engages under a head section (12) of the rail (9). In this way, it is ensured that the fitting is reliably secured whilst the structure remains compact.
