Abstract (en)

[origin: WO2012156471A1] The invention relates to a head (2) of an electromechanical actuator (1) for controlling a roll-up element (10), including; an element (20, 24) for mechanically linking to a body (3) of the actuator without rotational play; at least two torque take-up arms (22, 22a, 22b) suitable for engaging with an accessory (8) for attaching to a frame (9); at least one first part (25a) capable of being deformed by torque which is applied to the actuator, wherein the actuator head is characterized in that the first deformable part is built into a first torque take-up arm (22a).
