Abstract (en)

[origin: WO2012127053A1] The invention relates to an actuating mechanism comprising a first mobile element (1) comprising two toothings (10, 12), one for enabling the driving of the first mobile element and the other for driving a second mobile element (3) arranged so as to pivot, under the effect of the action of an elastic body (34), between an idle position and at least one actuating position, in which it can act on an additional mechanism (40, 64).
