Abstract (en)
[origin: WO2012158693A1] A system that incorporates teachings of the present disclosure may include, for example, one or more matching network elements and a controller coupled with the one or more matching network elements. The controller can determine antenna efficiency information associated with one or more antennas of a group of antennas of a communication device. The controller can determine antenna isolation information associated with the one or more antennas. The controller can tune the one or more matching network elements for at least a portion of the group of antennas based on the antenna efficiency information and the antenna isolation information. Additional embodiments are disclosed.
