Abstract (en)

[origin: WO2012156131A1] The invention relates to a checking apparatus for a camera, particularly from driver assistance systems in a motor vehicle, comprising a mount for a camera for at least two light sources for emitting test light to the camera, wherein the mount and at least one of the at least two light sources are arranged so that their relative situation and position are fixed in relation to one another, and a control device which is designed to operate the at least two light sources such that, in each case in chronological order, one light source is on and the at least one further light source is off. The invention likewise relates to a checking method for a camera and to a checking system.
