Abstract (en)
[origin: EP2711655A2] The cooling- and refrigerating device has a communication interface (20), which is designed such that the communication with the interface is carried out in a wireless manner. The interface is designed such that the communication is carried out according to Near field communication technology or Radio frequency identification technology. The interface has a passive or active radio frequency identification tag, which stays in communication with a memory, particularly an Electrically erasable programmable read-only memory. An independent claim is included for a system with a service unit.
