Abstract (en)
[origin: EP2711905A2] The signaling system (1) has a signaling element (2), which is mounted on or in a stationary element, and a magnet element (4), which is arranged on or in an element that is movable relative to the stationary element. The signaling element has a sensor unit, and the magnet element is designed for generating a magnetic- or electrical field. The sensor unit is formed to measure the field strength and the orientation of the magnetic- or electrical field in the space.
