Abstract (en)

[origin: WO2012152999A1] The invention relates to a method and arrangement for providing effect of a polymer on soil. The disclosed solution provides an injection structure (4) for arranging the effect of the polymer on the soil. The injection structure (4) comprises at least two injection elements (5). The injection element (5) comprises a frame pipe (6) through which the polymer is injected, and means for conveying the effect of polymer on the soil. The frame pipe (6) includes connection means (9) for connecting the injection element (5) as a part of the injection structure (4). The injection structure (4) comprises at least two injection elements (5) interconnected on site in such a manner that the injection elements (5) included in the injection structure (4) are separately transportable to the working site.
