Abstract (en)
[origin: EP2712532A2] The dust bag system has a connecting frame (1) which is secured in a retainer (6) of a vacuum cleaner and connected with a dust bag adapter plate (4). An inflow opening (5) of the adapter plate is connectably sealed with a connecting element of the vacuum cleaner at the periphery. The spacing between the outer sides (2,3) of the connecting frame is adjusted so that the laths (9) connected or non-connected with the connecting frame, are positively and non-positively inserted into the retainer of the vacuum cleaner.
