Abstract (en)

[origin: EP2712830A2] A traverse arm (74) includes an arm body (71) and a traverse guide (73) arranged at a tip-end portion of the arm body (71), and is adapted to be driven and swung by a swing-drive shaft (77) substantially perpendicular to a longitudinal direction of the arm body (71). The arm body (71) is made of a plate member, and at least a portion of the plate member is bent within a cross section perpendicular to the longitudinal direction to form a protrusion (82) that protrudes in a direction of the swing-drive shaft.
