Abstract (en)

[origin: EP2712996A2] The moving device (11) has an actuator (12) which is provided to drive the drive source for the movable furniture structure. A coupling device (15) is arranged between the actuator and the output shaft, so as to cooperate with the actuator and the output shaft. The detecting device causes the coupling device in end position of the output shaft to occupy coupling-off neutral position from the actuator. An independent claim is included for furniture with movable structure.
