Abstract (en)  
[origin: EP2713124A2] The apparatus has a cooled inner space divided into two compartments by a heat insulating horizontal partition plate (10). The partition plate is designed such that different temperatures are realizable at the compartments. The partition plate is insertable into the cooled inner space and comprises a power connection. The power connection is formed such that the power connection is automatically connected with another power connection during insertion of the former power connection into the partition plate, where the latter power connection is arranged in the cooled inner space.
