Abstract (en)

[origin: EP2713134A2] The structure (2) has a circular cylindrical portion that is extended in a longitudinal direction of the housing (4). Several profiled cooling segments (6) are extended with the constant cross-sectional shape along the longitudinal direction of the cylindrical portion. The cooling segments are provided with an inner bearing surface for external abutment on the housing. A retaining ring (10,16) is clamped in a form-fitting manner on the housing. The cooling segment is made of aluminum.
