Abstract (en)

A headset for voice communication and a network comprising a plurality of headsets are provided. The headset comprises at least one earphone, a microphone, an RFID reader configured to read an RFID tag and decode an information signal encoded in the RFID tag. The headset further comprises a processor configured to receive the information signal from the RFID reader, and control headset settings based on the received information signal. In the communication network the plurality of headsets may being configured to connect to a network application via a terminal, and at least one of the headset ID readers may be configured to read and decode an additional ID tag, and the at least one headset ID reader and corresponding processor are configured to read and decode the additional ID tag and coordinate access settings between headsets tagged with the first ID tag and the additional ID tag.
