Abstract (en)
   [origin: WO2012162711A1] The invention relates to a buckle assembly, comprising at least one buckle (1) and at least one release trigger (15),
   wherein the buckle has a first buckle component (2) and at least one additional buckle component (3) and the first buckle component (2) has at
   least one bar (4), which can be moved back and forth between a locked position of the bar (4) and an unlocked position of the bar (4), wherein in a
   connected position of the buckle components (2, 3) the bar (4) engages in the locked position thereof behind a locking surface (5) of the additional
   buckle component (3) in order to interlock the two buckle components (2, 3) and the bar (4) can be moved to the unlocked position thereof in order
   to disconnect the buckle components (2, 3) and the release trigger (15) is connected to at least one of the buckle components (2, 3) by means of at
   least one transmission line (16), in particular in the form of a Bowden cable, wherein the additional buckle component (3) has at least one counter
   bar (6), which can be moved from a locked position of the counter bar (6) to an unlocked position of the counter bar (6) by actuating the release
   trigger (15).
