Abstract (en)
[origin: WO2012164279A2] A safety clamp for use in a fall arrest system having a safety rail is disclosed. The safety clamp comprises a body portion and a plate portion together defining a passage having a longitudinal axis to receive a safety rail extending therethrough such that, in use, the clamp slides along said safety rail in a longitudinal direction. The portions being movable relative to each other between a first position in which the passage is open along its length to enable a safety rail to be inserted into, or removed from, the passage, at any location along the length of the safety rail and a second position in which the safety rail is retained within the passage.
