Abstract (en)

[origin: WO2012163499A1] In order to produce the end products, an initial part is divided into at least two components such that the latter have different thicknesses over the width thereof. The initial part is divided intelligently such that the end product is produced from the components resulting from the dividing process or is formed therefrom. The components resulting after the dividing process can already be the end products in the form of strips. However, it is also possible to subsequently assemble the components resulting after the dividing process to form the end product, for example a wall element.
