Abstract (en)  
[origin: WO2012163793A1] The invention relates to a charge carrier (10, 110, 120) having a main body (12) consisting of a particle foam. The charge carrier (10, 110, 120) has at least one mount (20, 22, 24, 112), which consists of a material which is harder than the particle foam and which has an anchoring portion (28), which is anchored in the main body (12) and is completely embedded in the particle foam, and a functional portion (30) which projects out of a surface of the main body (12). The at least one mount (20, 22, 24, 112) consists of hard plastic, and the main body (12) and the at least one mount (20, 22, 24, 112) are produced from the same plastic, in particular polypropylene, polyethylene or polyurethane.
