Abstract (en)  
[origin: WO2012163939A1] The invention relates to a lift installation with a drive frame and a drive unit, wherein a support element couples a lift cabin to a counterweight, wherein on the drive frame a drive roller and a spacer roller are mounted on a holding device assigned thereto, wherein the support element is guided via the space roller and the drive roller, wherein at least one of the holding devices can be fixed at at least two positions on the drive frame, with the result that a horizontal support element spacing is variable, wherein a total extension of the support element between the drive roller and the spacer roller is substantially rectilinear.
