Abstract (en)

[origin: WO2012163940A1] The invention relates to a lift car door/shaft door coupling (25) of a lift system in which the lift car door/shaft door coupling comprises at least one turning lever (29) that is pivotably-mounted on a rotational axis (50) that is associated with said turning lever (29). The turning lever (29) has a hinge point (36) and, furthermore, the lift car door/shaft door coupling comprises a first driving runner (38) which is mounted on the hinge point (36). The turning lever (29) comprises a base support (30) and an adjustment element (32) which is fixed to said base support (30) with the aid of an adjustable fixing element (34), said adjustable fixing element (34) allowing a distance (46) between the hinge point (36) and the associated rotational axis (50) to be adjusted.
