Abstract (en)  
[origin: WO2012161629A1] A mounting clip (10) for slidingly attaching a metal roof panel seam to a support structure through a compressible layer comprises a sheet metal anchoring member comprising a base plate for attaching to said support structure, and an upright portion integral with the base plate; and a seam holder having a seam holding end for engaging with said seam, the seam holder being slidingly connected to the upright portion of the anchoring member so as to allow sliding of the seam holder relative to the anchoring member along a sliding axis, the upright portion of the anchoring member comprising at least one seam holder engagement tab having a fold forming, together with a mating fold of the seam holder, a sliding folds engagement (35); and the anchoring member comprising at least two axially separated support tabs (24, 26) for supporting the anchoring member in a stop direction, which is parallel to the plane of the support structure and transversal to the sliding axis, so as to maintain the mounting clip (10) aligned with the roof panel seam, said support tabs (24, 26) extending beyond the upright extent of the seam holder engagement tab along a plane transversal to the stop direction.
