Abstract (en)
[origin: WO2012164278A1] A safety clamp for use in a fall arrest system having first and second safety rail sections that meet at a junction is disclosed. The safety clamp comprises first and second passages configured to respectively receive the first and second safety rail sections to enable the safety clamp to slide along the safety rail sections and for the safety clamp to switch between receiving the first safety rail section and the second safety rail section as the clamp slides through the junction.
