Abstract (en)  
[origin: WO2012163961A1] The invention relates to a steam generator, comprising a combustion chamber (1), a flue gas duct (10), and a boiler assembly (2). The boiler assembly (2) has a plurality of individual, identically designed steam boilers (3) for obtaining an appropriate amount of steam. The steam boilers have riser pipes (4) that are guided through the combustion chamber (1). The steam boilers (3) can optionally have a respective pipe array, which comprises at least the riser pipe (4), a steam discharge pipe (5), a down pipe (6), and a connecting pipe (7) that leads from the down pipe (6) to the riser pipe (4).
