Abstract (en)
[origin: WO2012162480A1] An oven comprising: - a stationary structure (12) defining a cavity (14) having a front opening (16), the stationary structure (12) having a frame (18) which surrounds said front opening (14), - a door (20) hinged on one side (18h) of said frame and movable between an open position and a closed position, - at least one lighting device (38) arranged to light said cavity (14), and - a door cooling system (26) comprising a fan (28) borne by the stationary structure (12) and a cooling space (30) integrated in the door (20), in which the air flow produced by said fan (28) is conveyed into said cooling space (30) in the closed position of the door (20), wherein said lighting device (38) is fitted to said frame (18), is arranged to direct the light radiation toward said cavity (14), and is struck by at least a part of the cooling air flow produced by said fan (38).
