Abstract (en)
[origin: WO2012136229A2] The invention relates to a sectional radiator which has at least two radiator sections each having a longitudinal portion with a longitudinal channel which, on one side, opens out into a first transverse channel of a first transverse portion and, on the other side, opens out into a second transverse channel of a second transverse portion. The radiator sections are arranged one beside the other and are connected to one another via their transverse portions. An opening connector is arranged on at least one transverse portion, on a side which is directed away from the longitudinal portion, and is designed to be directed in the same way as the longitudinal channel.
