Abstract (en)
[origin: WO2012159799A1] The invention relates to a diagnostic device for motor vehicles, comprising at least a first interface for reading out error status information from a memory of a motor vehicle, at least a second interface for receiving and/or transmitting community content and error status information, an operator control device for a user to control the diagnostic device, a display device for displaying the information, and a processing device for processing the information, wherein the processing device is connected to the first and second interfaces, and the processing device is designed to transmit and condition the community content and error status information by means of the first and/or second interface, and to display said information by means of the display device. The invention also relates to a diagnostic method for motor vehicles, a diagnostic system and a use of a diagnostic device.
