Abstract (en)

[origin: WO2012164194A1] The present invention relates to a composition of an active film of an organic photovoltaic cell, comprising: an electron-donor material consisting of a conjugated polymer; and an electron-acceptor material consisting of a polymer, characterized in that the active film comprises a copolymer with a linear structure comprising: two to five blocks, at least two blocks of which have different chemical natures; two consecutive blocks having different chemical natures; each block having a molar mass of between 500 g/mol and 50,000 g/mol. The invention also relates to an organic-cell-based photovoltaic module incorporating such a composition and the use of this composition for the same purposes.
