Abstract (en)
   [origin: EP2716504A1] Provided is an airbag device capable of preventing the occurrence of fish-mouth phenomenon and of reducing the weight
   of a retainer. An airbag device provided with an airbag (2) which is usually folded and which expands and develops in an emergency, an inflator
   (3) for supplying gas to the airbag (2), a retainer (4) for securing the airbag (2) and the inflator (3), and an airbag cover (5) for housing the airbag
   (2), wherein: the airbag cover (5) has a plate-like part (51), which constitutes the interior surface of a vehicle, and an inner case (52), which is
   disposed on the rear surface of the plate-like part (51) and constitutes an expansion and development path for the airbag (2); the inner case (52) has
   a plurality of retention holes (53) for retaining the retainer (4); and the retainer (4) has a roughly planar-shaped support body (41) capable of being
   stored within the inner case (52) and an annular belt-like body (42) inserted into the retention holes (53) and attached to the support body (41).
