Abstract (en)

One aspect of the invention provides a packing material that can reduce time and effort of the work to attach an article including a protruding portion, which protrudes downward from a lower surface of the article, to a wall with the lower surface oriented downward, and a method for attaching the article. The article is packed in the packing material. The article includes the protruding portion that protrudes downward from the lower surface, and the article is attached to the wall with the protruding portion oriented downward. The packing material includes: a first shock absorber configured to include a recess in which the protruding portion is accommodated, the lower surface of the article being fitted in the first shock absorber; and a box that accommodates the article, which is fitted in the first shock absorber, therein. The first shock absorber can hold the article while the lower surface of the article is oriented downward, when the article is taken out from the box while fitted in the first shock absorber.
