Abstract (en)
[origin: EP2716576A1] The bin (10) has a tank (11), side faces (12A-12C) forming a peripheral wall (17), a bottom wall (14), and a connection region (16) for connecting the side faces. Another connection region (22) connects the side faces and the bottom wall. A rib is provided in the bottom wall for resting the bin on the ground in a normal waiting position. The peripheral wall forms a downward extension (34) only to the right and in the vicinity of overlapping regions (32) of the connection regions, so as to be supported on the ground when the bin is in the normal waiting position.
