Abstract (en)

[origin: EP2716853A1] The invention relates to the registration of a device for the transmission of the closing movement of the cremona seals on sliding aluminum windows, PVC, wood, steel, polyurethane, and generally all kinds of materials. In particular it relates to a fixture of steel, divided into several independent elements interconnected, that are responsible for transmitting the movement of the locking fittings to the inner sealing gaskets leaves sliding windows thereby ensuring one greater seal between said sheets and fixed elements or frames, such that the invention is particularly suitable for installation in areas of particularly severe weather, and more energy efficient.
