Abstract (en)  
[origin: EP2716916A2] The unit has a diffuser (4) comprising an interface (20) i.e. circulating radial flange, to which a diffuser cap (22) is connected with another interface (23). The diffuser cap is releasably connected with the diffuser. A cladding of the diffuser cap consists of skirt portions (16) that are connected through form closure parts. The form closure parts produce a positive connection with the cladding in a circumferential direction and permit the connection transverse to the circumferential direction.
