Abstract (en)

[origin: WO2012168195A1] The invention relates to a block molding machine (1) comprising a bearing block (3) and a primary frame (2) which can be locked on the bearing block (3) in a vertically adjustable manner. At least one mold lifting device (19) for lifting and lowering a block mold (20) is provided on the primary frame (2). The primary frame (2) can be displaced relative to the bearing block (3) by actuating the mold lifting device (19) which is supported on the bearing block (3). The invention further relates to a method for vertically adjusting a block molding machine (1), comprising the following steps: displacing a mold lifting device (19) to a position (AS) supported on a bearing block (3); releasing a primary frame locking unit (9) for the primary frame (2); actuating the mold lifting device (19) such that the primary frame (2) is lifted; and applying the primary frame locking unit (9) for the primary frame (2).
