Abstract (en)

[origin: WO2012170924A2] Techniques for movement languages in wearable- devices are described, including receiving input from a sensor coupled to a wearable device, processing the input to determine a pattern, the pattern associated with a movement, referencing a pattern library stored in a database to compare the pattern to a set of patterns in the pattern library, and performing an operation based on a comparison of the pattern to the set of patterns.
