Abstract (en)
[origin: WO2012168566A1] The supporting clip according to the invention comprises a main clip body (7) having an inner side flange (7a) rigidly connected to a top transverse flange (7b) that has top rollers (9, 11, 12) capable of rolling on the surfaces of a guide rail of a strip-stretching machine. A clip bottom (8) is mounted onto the main clip body (7), and has bottom rollers (15, 17, 18) capable of rolling on the side surfaces of the guide rail. A strip-clamping means (14) makes it possible to hold an edge of a strip (2) of material along an inner side (5) of the clip body (7). The top transverse flange (7b) is flat and free of outer flaps such that the cross-section of the main clip body (7) has the general shape of an inverted "L". The clip bottom (8) is flat and free of outer flaps. A lightweight clip which efficiently removes greasy residue can thus be produced.
