Abstract (en)  
[origin: CA2840919A1] The invention relates to a lubrication device having at least one fastening unit (12) for fastening the lubrication device relative to and adjacent to a rail (10) of a track during an entire operating process and having at least one output unit (14) for providing at least a part of an upper face (16) of the rail (10) with lubricant during the operation process. According to the invention, the output unit (14) sprays lubricant on the upper face (16) of the rail (10) during the operation process.
