Abstract (en)

[origin: WO2012168134A2] The method and the device (9) serve for the installation of a false floor (10) above a bare floor (3). The false floor (10) preferably comprises false-floor supports (2) which are placed on the bare floor (1) in a regular grid pattern and on which floor panels (1) are arranged alongside one another in rows. According to the invention, mounting positions (30A; 30B; ...) are determined for the false-floor supports (2) and the false-floor supports (2) to be installed are correspondingly positioned. Furthermore, a mounting plane (EM) lying at a mounting height (hM) is at least partially determined using laser devices (91). The false-floor supports (2) to be installed are then positioned relative to the mounting plane (EM). Pedestals (23) which are composed of solidifying pedestal material (2300) binding to the bare floor (3) and which project beyond the mounting plane (EM) are provided at the mounting position (30A; 30B; ...) before, during or after the positioning of the false-floor supports (2). The false-floor supports (2A; 2B; ...) are then each held in the respective pedestal (23) until the latter has solidified.
