Abstract (en)

[origin: WO2012167771A2] The invention relates to a door lock assembly for a motor vehicle, in particular for a side door or tailgate, said door lock assembly comprising a housing in which a rotary latch and a pawl are arranged, said pawl being mechanically connected to a catch. The pawl and the catch are designed to be movable relative to one another. The catch is movable, in particular during an opening process, by means of a driver element using an electric motor, and contains a recess for receiving the pawl.
