Abstract (en)

[origin: WO2012168609A1] The invention relates to a contact pad (10) which is made of a flexible material and which is to be attached into an opening (3) provided in a rigid part (2), one of the ends of said contact pad (10) comprising a pointed portion (11), and the other end of said contact pad (10) comprising an annular shoulder (12) for bearing around the opening (3) of the rigid part (2), characterized in that the pointed portion (11) of the contact pad (10) has a plastic part (13) having two flexible flanges (14) extending from either side of the pointed portion (11) in a manner symmetrical to the axis (15) of the contact pad, said two flanges (14) being spaced apart from each other such that each is be capable of bending toward said pointed portion (11) upon being inserted into the opening (3), and then of separating from each other after passing through said opening (3) so as to engage with the edge (3a) of the latter.
