Abstract (en)
[origin: GB2491841A] A spectacle frame 10 with an adjustable nose bridge 13 includes two lens holders 11 and an angled bar 12 with diverging arms 14. Each of the holders 11 is coupled to a channel 16. Each of the arms 14 is insertable into the channel 16 of one of the lens holders 11. A distance between the lens holders 11 is adjustable by adjusting a length of insertion of the arms 14 into the channels 16. A horizontal bar 18 cooperates with notches 28 formed in the arms 14 to retain the angled bar in the desired position.
