Abstract (en)

[origin: EP2719508A1] The apparatus has an eccentric drive (200) with a powertrain and an eccentric shaft. The drive drives the eccentric shaft over the powertrain and attached with an eccentric cam on the eccentric shaft for stroke moving of a crucible (10). A roller shoe i.e. roller circulation shoe, is arranged in a force flow between the eccentric cam and the crucible for transmission of a punching- and/or embossing force of the eccentric cam on the crucible. The roller shoe comprises multiple roller-shaped rolling elements i.e. cylindrical rollers, which are guided in a cage.
