Abstract (en)

[origin: EP2719628A1] A hooding machine is disclosed, comprising a support frame (1) on which a system for the forming of a sleeve made of plastic material is arranged. A distribution unit (11) is provided mounted vertically movable with respect to the support frame (1) of the machine, and gripping and advancement means consist of at least a first advancement device (10, 10a) comprising two symmetrically opposite conveyor-belt assemblies (12,13; 14,15), which run on two end-less paths having at least adjacent continuous portions (12a,13a; 14a,15a), along which said belts adhere by pressure one to the other dragging between them a plastic sheet (F) for forming the hood, each of said assemblies of mutually opposite belts also having at least a variable-geometry loop (12g, 13g) the size of which is reduced or extended based on at least the vertical displacement of said distribution unit (11).
