Abstract (en)

[origin: WO2012172193A1] The invention relates to a heating, ventilation and/or air-conditioning device (1) including at least a first component (9) for generating heat and/or cold, at least a second component (13), a power supply circuit (3) shared by the first and second components, and a controller (4) for the power supply circuit (3). The first and the second components cooperate to output air at a selected temperature. The device is characterized in that it further includes a relay (5) for cutting off the supply of power to the first component (9). The relay (5) can be activated separately from the controller (4), and is arranged in the circuit such that the supply of power to the second component (13) is independent of the state of activation of the relay (5).
