Abstract (en)
[origin: WO2012172059A1] The invention relates to an organic light-emitting diode (OLED) including a stack including, in sequence and in the following order, a substrate (2), a first electrode (3), an organic layer (4), and a second electrode (5), characterized in that it includes a layer of adhesive (6) and a cover (7) attached onto said stack via said layer of adhesive (6), and the cover (7) includes at least one through-opening (8), wherein electrical access to an electrode (3, 5) is possible through said opening (8). The present invention can be specifically used in electronic devices having screens and lighting.
